# Advisory Bureau for Higher Studies

The Advisory Bureau for Higher Studies (ABHS) was established in the year 1999, with the prime motto to serve the student community for getting admission to higher studies in India and abroad. The main objective is to enable the students to prepare for tests like GRE, TOEFL, GMAT, IELTS, GATE, CAT, etc. ABHS has the latest information regarding these exams. The students can access ABHS for getting information about various universities and courses they offer. The record of the alumni pursuing higher studies is well-maintained in the ABHS. In St. Joseph's Institute of Technology, ABHS was inaugurated in the year 2013 with similar objectives.

# BUSINESS ENGLISH CERTIFICATE

We prepare for

**Cambridge**  
English Qualifications™

The Business English Certificate (BEC), a certification from Cambridge Assessment English, Cambridge University, is a qualification which is specifically in English for work: whether it is industry, business or government. BEC gives an opportunity to learn practical language skills as in workplace.

BEC certification is offered under three levels- Preliminary, Vantage and Higher. Every year, a diagnostic test is conducted for all the students and they are categorized under three levels. Based on the level of categorization, students are given training for the test to attain BEC Certificate, they are assessed in the four areas: listening, speaking, reading and writing. The tasks and questions are taken from real workplace situations. For the past seven years, BEC examination has been conducted by Cambridge in our college campus.

*We have been awarded as South Asia's Best 25 preparation centers for higher education 2016-2018.*

*We have been awarded for "Continuous Excellence" by Cambridge Assessment English for the year 2019-2020.*

These six students will conduct various activities focusing on developing the communication skills of students and making them void of stage fear. This programme envisioned by our Chairman has proved to be an effective tool to inculcate leadership qualities. Here the students apart from developing their confidence levels also use this as a platform to collaborate with others. The activities are planned at different levels for students at different stages based on their year of study.

### **Communication skills:**

For the first year students, the main focus is on developing communication skills and instilling confidence. The student organizers start from basics like memory games, tongue twisters, and shipwreck. Then they slowly move on to basic grammar using the play way method and translation games. They listen to audio and video clippings which would serve the dual purpose of motivating them and teaching them language. Peers scaffold them and help them to come out of their shells. Students are trained to influence and convince others, to discuss and reach agreement. Awareness of achievements, abilities, values, weaknesses and what one wants out of life is also done through sessions designed to analyze their self. They develop the competencies needed for current and future roles.

### **Interpersonal skills development activities:**

For the second year students the focus is on developing soft skills. Various activities are conducted to create awareness and develop their efficacy in handling situations. Students have various activities like role play, channel surfing, quiz, debate, technical puzzles.

### Patent Awarded

**Dr. M. Chamundeswari**, Associate Professor research work has been published as a “News in Current Science” Journal Volume 118, Issue 2 dated 25<sup>th</sup> January, 2020 as one of the “Best research highlight in Science Last Fortnight”. In extension of the above work she has received a Grant of **Rs. 29 Lakhs** from DST, New Delhi, India for implementation in collaboration with Industry for scaling up at Industrial Level for the project titled “Carbon Quantum dots from microalgae for organic dyes degradation in industrial waste water – A novel approach”.

**Spirulina platensis**  
For organic dye degradation

Organic dyes released from the textile, paper, pharmaceutical, printing, leather and cosmetic industries pollute water. While photo-catalysts can be used to degrade many of these polluting chemicals, the metal-oxide nanoparticles used for the purpose leave residues in water.

Reports show that many algae are also capable of degrading dyes. These algae accumulate the toxic substances which then need to be harvested. But it is known that some blue-green algae, such as *Spirulina platensis*, also secrete photosensitive proteins. And this is available as waste from raceway ponds where the organism is cultivated for nutraceutical uses. Can we use the photosensitizer from the waste of algal cultivation to remediate water polluted by dyes?

At Chamundeswari and S. Saravanan from the St. Joseph's College of Engineering, Chennai set the problem to their research scholar, Sibirama. The team collected the water from the raceway ponds of three different companies. The water was greenish and contained some amount of microalgae. They filtered the algal cells out to test the cell-free water.

The team subjected three different dyes - methylene blue, malachite green and Congo red, released from industries. They mixed the dyes with the *S. platensis*-cultivated wastewater in different concentrations and kept these mixtures in the dark as
